

IN THE ABSTRACT:

Please substitute the following Abstract for the Abstract starting at page 48,  
line 2 and ending at line 18.

A3

A network apparatus ~~which can efficiently display connecting states of network apparatuses connected to a network is provided. The network apparatus of the invention has-~~  
~~means for~~ is capable of calculating positions on a display screen where ~~the~~ connecting states of  
network apparatuses connected to a network are displayed on the basis of connecting information  
of the network apparatuses on the network and peripherals connected thereto and displaying the  
positions; ~~and means.~~ In addition, a controller is provided for controlling in such a manner that  
when it is necessary to change the display positions by a display change instruction, the display  
positions are again calculated and displayed on a display screen, and when a reduced display is  
designated, the peripherals connected to the network apparatus on the network are not displayed,  
and when an expanded display is designated, the peripherals connected to the network apparatus  
on the network are displayed.
